

Outlook on Life Surveys

Principal Investigator(s): Robnett, Belinda, University of California-Irvine; Tate, Katherine, Brown University

Summary:

The 2012 Outlook Surveys, conducted by GfK Knowledge Networks on behalf of the University of California Irvine, were designed to study political and social attitudes in the United States. The project included two surveys fielded between August and December 2012 using a sample from an Internet panel. A total of 2,294 respondents participated in this study during Wave 1 and 1,601 were interviewed during Wave 2. The target population was comprised of four groups: African American/Black males aged 18 and older, African American/Black females aged 18 and older, White/other race males aged 18 and older, and White/other race females aged 18 older, all non-institutionalized and residing in the United States. The survey considered the ways in which social class, ethnicity, marital status, feminism, religiosity, political orientation, sexual behavior, and cultural beliefs or stereotypes influence opinion and behavior. Participants were asked an array of questions pertaining to voting preference, party identification, respondent perception of opportunity for success, and views on interracial dating. These variables and questions examine political and social attitudes in the United States. Additional questions addressed issues such as common fate, nationalism, equality, discrimination, and relations with law enforcement. Demographic variables include race ethnicity, age, gender, religious involvement, sexual orientation, citizenship, annual income, and education.

Methodology

Study Purpose: The purpose of the 2012 Outlook Surveys were to study political and social attitudes in the United States. The specific purpose of the survey is to consider the ways in which social class, ethnicity, marital status, feminism, religiosity, political orientation, and cultural beliefs or stereotypes influence opinion and behavior.

Study Design: The project included two surveys fielded between August and December 2012 using a sample from an Internet panel. A total of 2,294 respondents participated in this study; 1,601 were re-interviewed. The survey also contained a large oversample of Black ethnics.

Sample: Participants were drawn from the GfK Knowledge Network, a web panel designed to be representative of the United States population. Panel members are randomly recruited through probability-based sampling, and households are provided with access to the Internet and hardware if needed. Random-digit dialing and address-based sampling methodologies are used. The target population were non-institutionalized adults 18 years of age and older.

Time Method: Cross-sectional , Cross-sectional ad-hoc follow-up

Kind of Data: quantitative

Mode of Data Collection: web-based survey

Description of Variables: The data include variables pertaining to social class, ethnicity, marital status, feminism, religiosity, and political orientation. In addition there are variables

pertaining to gender, household composition and size, household income, employment status, education, and marital status.

Response Rates: Wave 1: 55.3 percent response rate. Wave 2: 75.1 percent response rate.

Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE
WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR PROCESSING NOTE FOR # 35348

Outlook on Life Surveys, 2012

1) Confidentiality:

- ICPSR has recoded numeric variables with sensitive information using top and bottom coding methods to protect respondent confidentiality.
- Values that were deemed as indirect identifiers (such as interview date and time) ICPSR used a series of data coarsening techniques to protect for confidentiality.

2) Question Text:

- Question text was added to the data based on the original data collection instrument deposited by the Principal Investigator.

3) Value and Variable labels:

- Value and Variable labels were standardized based on the original data collection instrument deposited by the Principal Investigator.
- Any spelling errors found in the value labels were corrected during ICPSR processing.

4) Missing Values:

- Missing values were standardized as per the study's convention.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
